- **Responsible Management.** For América Móvil, protecting Personal Data is a daily task that is translated into a proactive responsibility to apply appropriate physical, technical and organizational measures to guarantee and demonstrate that Personal Data is processed in line with applicable regulations.
- **Commitment.** We guarantee that Personal Data is protected and used exclusively for the purposes authorized by the Data Subject and in accordance with applicable regulations. In addition, throughout the phases of development, provision and improvement of our Services, we adhere to a permanent ethical commitment to protect people's privacy, human rights, fundamental freedoms and dignity, in accordance with applicable laws in effect in the countries where we operate.

For América Móvil, Personal Data Protection is crucial activity to promote and guarantee respect for human rights in each of the jurisdictions where we operate. We are firmly committed to the lawful Processing of Personal Data and to the application of the necessary measures to constantly demonstrate responsible handling of such data, which are described in the guidelines set forth herein.

A. Data Protection by Design and by Default

We endeavor to implement appropriate physical, technical and organizational measures, both at the time of determining the means of Processing and at the time of Processing the Personal Data, taking into account the state of the art, the cost of implementation and the nature, scope, context and purposes of the Processing, as well as the risks that certain Processing could imply for the rights and freedoms of Data Subjects.

In line with international trends, we strive to incorporate data protection **by design**, seeking a healthy balance between company's interests and the protection of individual's rights, maintaining a focus on the privacy of Data Subjects, and offering visibility and transparency in the handling of their information.

Further, we apply appropriate technical and organizational measures to ensure that, **by default**, only Personal Data, which is necessary for each specific purpose of the Processing, is processed. In addition, we ensure that the Personal Data collected is used for no longer than is required in relation to the purpose of the Processing.

D. Risk Assessment

An important pillar of our Privacy Program is the identification of our legal obligations and existing proceedings in connection with Personal Data Protection, and the determination of the level of compliance in each of the Company's Subsidiaries. Risk analysis is a tool that allows us to make an objective assessment of the risks and determine the possible measures that can be implemented to mitigate them in the event a certain Processing or activity may affect the rights of individuals.

To do this, we take into account various applicable legal requirements, as well as international best practices and standards for the Protection of Personal Data. Further, before launching new products and services, we at América Móvil conduct an assessment of possible risks and implications a specific processing of personal data may involve for the fundamental rights and liberties of people, such as freedom of speech, privacy, and protection of personal data. In particular, the Company implements measures to identify, prevent and eradicate discrimination or disloyal practices in all activities requiring the use of personal data.

In addition, when planning to issue, modify or add internal policies and procedures, the risks derived from implementing our own privacy and local policies should be considered in order to assess and/or mitigate anything that may affect the rights of freedom of speech, information, privacy and non-discrimination of data subjects.

We at América Móvil are committed to being proactive, responsible and ethical in the use of algorithms and technologies based on artificial intelligence, verifying that they are used in line with our internal policies and with human rights regulations in effect, so we will not adopt practices that may directly and without justification restrict or unduly affect people's human rights.

Among the duties of the Privacy Team is to identify the life cycle of personal data in each of the Company's Subsidiaries, identify threats and vulnerabilities, and manage risks in order to design strategies to prevent data breaches and/or violations of applicable laws, and accordingly, ensure that Data Subjects enjoy human rights such as privacy, protection of personal data and freedom of speech.

We constantly work to manage Risks with the purpose of minimizing exposure, improving our control measures to reduce their likelihood and impact, and mitigating inherent Risks through the adoption of appropriate measures until any residual Risks are at a reasonable level.

In general terms, our risk management and handling process is based on various international standards for information security that allow us to identify, assess, avoid, mitigate, accept and manage risks to the company's assets and information.

Our risk analysis and management methodology is based on mechanisms to review and reassess with the purpose of ensuring that our internal regulations and the obligations provided for in applicable laws are fulfilled.

Our risk management methodology takes into account the following:

- Design of a risk management framework.
- Implementation of all necessary mechanisms for risk management.
- Follow-up of risks with audits or reports.
- Changes in the framework in order to improve and avoid both foreseen risks and unforeseen risks.

At América Móvil, risk assessment is not a static activity, but is subject to a constant evaluation process in order to protect the information Data Subjects entrust us.

In line with the principles of proactive responsibility and ongoing improvement, our Risk map will be updated once a year, or more often where necessary in view of material issues that may impact its structure.

E. Data Protection Impact Assessment (DPIA)

When it is likely that a certain Processing, particularly if it involves using new technologies, due to its nature, scope, context or purposes, may involve a high risk for the protection of human rights and fundamental freedoms, in line with the best international practices and applicable legal requirements, each Subsidiary or region will conduct, prior to adopting such Processing, a Data Protection Impact Assessment (DPIA) with the purpose of showing that it acts responsibly in using personal data and applying specific measures to identify, contain and mitigate risks that may be derived from the use of personal data.
